

Process & Decision Documentation

Project/Assignment Decisions

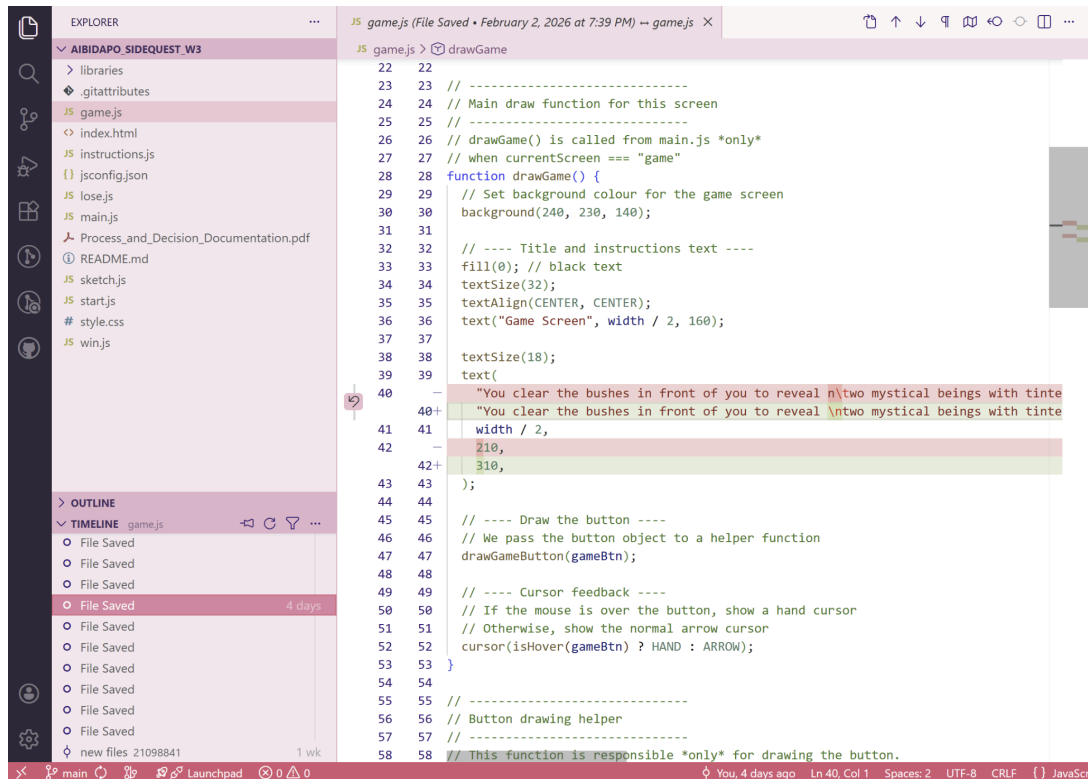

Choose to take the basic screens and make them into a narrative game. I chose to base the story off of my favourite childhood show, Winx Club, but added different options to see how the character would have ended up if they did not make the core decisions to cause the story to move along (aka not fighting that Ogre). For example, the game gives the user the option to avoid meeting the fairies that start the lifelong quest of the main character at the start of the game. Another change is that there's a chance the character you are playing displays their hidden magical power (using the built in “Win-Lose” randomizer mechanic originally in the source code). I made these decisions solely from a narrative standpoint, I thought it could be interesting to me to imagine a childhood show I used to adore never ending up the way it did.

Process Evidence

Game.js

```
15 const gameBtn = {
18+   w: 260, // width
19+   h: 90, // height
20+   label: "PRESS HERE", // text shown on the button
21+ };
22+
23+ // -----
24+ // Main draw function for this screen
25+ // -----
26+ // drawGame() is called from main.js *only*
27+ // when currentScreen == "game"
28+ function drawGame() {
29+   // Set background colour for the game screen
30+   background(240, 230, 140);
31+
32+   // ---- Title and instructions text ----
33+   fill(0); // black text
34+   textSize(32);
35+   textAlign(CENTER, CENTER);
36+   text("Game Screen", width / 2, 160);
37+
38+   textSize(18);
39+   text(
40+     "Click the button (or press ENTER) for a random result.",
41+     width / 2,
42+     210,
43+   );
44+
45+   // ---- Draw the button ----
46+   // We pass the button object to a helper function
47+   drawGameButton(gameBtn);
48+
49+   // ---- Cursor feedback ----
50+   // If the mouse is over the button, show a hand cursor
51+   // Otherwise, show the normal arrow cursor
52+   cursor(isHover(gameBtn) ? HAND : ARROW);
53+ }
54+
55+ // -----
```

```

const gameBtn = {
  x: 400, // x position (centre of the button)
  y: 550, // y position (centre of the button)
  w: 260, // width
  h: 90, // height
  label: "Fight Back", // text shown on the button
};

```

```

textSize(18);
text(
  "You clear the bushes in front of you to reveal \ntwo mystical beings with t
  width / 2,
  310,
);

```

Instructions.js

```
13 function drawInstr() {
17+ // ---- Screen title ----
18+ fill(0);
19+ textAlign(CENTER, TOP);
20+ textSize(36);
21+ text("Instructions", width / 2, 80);
22+
23+ // ---- Instruction text ----
24+ textSize(18);
25+
26+ // \n creates a line break in the text
27+ // This is useful for simple multi-line instructions
28+ const lines =
29+   "Press the game button.\n" + "You have a chance to win or lose!";
30+
31+ text(lines, width / 2, 160);
32+
33+ // ---- Back button ----
34+ // This button lets the player return to the start screen
35+ const backBtn = {
36+   x: width / 2, // centred horizontally
37+   y: 560,
38+   w: 220,
39+   h: 70,
40+   label: "BACK",
41+ };
42+
43+ // Draw the back button
44+ drawInstrButton(backBtn);
45+
46+ // Change cursor when hovering over the button
47+ cursor(isHover(backBtn) ? HAND : ARROW);
48+ }
49+
50+ // -----
51+ // Mouse input for instructions screen
52+ // -----
53+ // Called from main.js only when currentScreen === "instr"
```

```
6 6 // 3) helper functions specific to this screen
7 7
8 8 // -----
9 9 // Main draw function for instructions screen
10 10 // -----
11 11 // drawInstr() is called from main.js
12 12 // only when currentScreen === "instr"
13 13 function drawInstr() {
14 14   // Light neutral background
15 15   background(240);
16 16
17 17   // ---- Screen title ----
18 18   fill(0);
19 19   textAlign(CENTER, TOP);
20 20   textSize(36);
21 21   text("Instructions", width / 2, 80);
22 22   textSize(20);
23 23   text(
24 24     "You started heading back home. As you walk back, there is a heaviness in your heart,
25 25     width / 2,
26 26     80,
27 27   );
28 28
29 29   // ---- Instruction text ----
30 30   textSize(18);
31 31
32 32   // \n creates a line break in the text
33 33   // This is useful for simple multi-line instructions
34 34   const lines =
35 35     "Press the game button.\n" + "You have a chance to win or lose!";
36 36
37 37   text(lines, width / 2, 160);
38 38
39 39   // ---- Back button ----
40 40   // This button lets the player return to the start screen
41 41   const backBtn = {
42 42     x: width / 2, // centred horizontally
43 43     y: 560,
44 44     w: 220,
45 45     h: 70,
46 46     label: "BACK",
47 47   };
48 48
49 49   // Draw the back button
50 50   drawInstrButton(backBtn);
51 51
52 52   // Change cursor when hovering over the button
53 53   cursor(isHover(backBtn) ? HAND : ARROW);
54 54 }
55 55
56 56 // -----
57 57 // Mouse input for instructions screen
58 58 // -----
59 59 // Called from main.js only when currentScreen === "instr"
```

```

const backBtn = {
  x: width / 2, // centred horizontally
  y: 560,
  w: 220,
  h: 70,
  label: "Try Again",
};

```

Lose.js

```

4 4 // 1) drawLose() → what the lose screen looks like
5 5 // 2) input handlers → how the player returns to the start screen
6 6
7 7 // -----
8 8 // Main draw function for lose screen
9 9 // -----
10 10 // drawLose() is called from main.js
11 11 // only when currentScreen === "lose"
12 12 function drawLose() {
13 13   // Red-tinted background to communicate failure
14 14   background(255, 210, 210);
15 15
16 16   fill(0);
17 17   textAlign(CENTER, CENTER);
18 18
19 19   // Main message
20 20   textSize(36);
21 21   text(
22 22     "You push the Ogre back from the fairies, \ncausing him to tumble back and \nget
23 23     width / 2,
24 24     300,
25 25   );
26 26
27 27   // Instruction text
28 28   textSize(20);
29 29   text("Click or press R to return to Start.", width / 2, 360);
30 30 }
31 31
32 32 // -----
33 33 // Mouse input for lose screen
34 34 // -----
35 35 // Any mouse click returns the player to the start screen
36 36 // (no buttons needed for this simple end state)
37 37 function loseMousePressed() {
38 38   currentScreen = "start";
39 39 }

```

```
